## Before Eating Fish That You Catch

Check with your State's Health Department for a fish consumption advisory for locally caught fish and avoid eating highly contaminated fish. Visit our website.

## Why Eat Fish?

Pregnant or nursing women who eat fish that is high in omega-3 fatty acids will pass these nutrients to their babies and support healthy brain and eye development.

## How Much Fish to Eat?

Health experts recommend that women eat 8-12 ounces/week and children (ages 2-6) eat 2 ounces/week. Three ounces of fish is about the size of a deck of cards.

## Do Not Eat Raw Fish

When pregnant, avoid eating raw oysters, raw fish (sushi) or refrigerated smoked fish. Do not feed raw fish to infants or children.
