

2006 Florida Youth Tobacco Survey

Duval County

Changes and Trends from 2000 to 2006

The Florida Youth Tobacco Survey (FYTS) is a statewide, school-based confidential survey that has been conducted annually since 1998. The FYTS collects information regarding the statewide prevalence of tobacco use, attitudes, and related behaviors among middle and high school students throughout Florida and tracks those behaviors over time. The FYTS has been administered annually at the state level since 1998 and has been administered at the county level in 2000, 2002, and 2006. With three years of county level data, we are now able to track changes within each county.

In Duval County, 780 middle school students and 817 high school students in 24 public schools completed the 2006 FYTS. This report presents the county level data in 2000, 2002, and 2006. State and county prevalence from 2000 and 2002 were included for comparison. The county level data and state level data are weighted to represent the entire population of Duval County public middle and high school students and Florida public middle and high school students respectively. These data can be used by county health departments, school districts, and other community organizations and citizens to estimate the magnitude of youth tobacco use in Duval County, as well as to compare tobacco use, attitudes, and related behaviors in Duval County to those for Florida as a whole.

Current Tobacco Use

Current Tobacco Use

Current tobacco use is defined as having used any form of tobacco, on one or more of the past 30 days. Any form of tobacco includes cigarettes, cigars, smokeless or chewing tobacco, and specialty tobacco such as pipe tobacco, Bidis (small brown cigarettes from India), or Kreteks more commonly known as "clove cigarettes." Overall tobacco use among Duval County middle school students has decreased by 2.2 percent from 12.2 percent in 2000 to 11.9 percent in 2006. Overall tobacco use among Duval County high school students has decreased by 15.5 percent from 28.1 percent in 2000 to 23.7 percent in 2006.

Current Use of Any form of Tobacco*

*Data are available only where point estimates are shown.

Current Cigarette Use

Current cigarette use is defined as having smoked a cigarette on one or more of the past 30 days. The prevalence of cigarette use among Duval County middle school students has decreased by 32.6 percent from 9.1 percent in 2000 to 6.1 percent in 2006. The prevalence of cigarette use among Duval County high school students has decreased by 21.6 percent from 19.2 percent in 2000 to 15.1 percent in 2006.

Current Cigar Use

Current cigar use is defined as having smoked a cigar on one or more of the past 30 days. The prevalence of cigar use among Duval County middle school students has increased by 32.2 percent from 6.5 percent in 2000 to 8.6 percent in 2006. The prevalence of cigar use among Duval County high school students has decreased by 16.1 percent from 16.8 percent in 2000 to 14.1 percent in 2006.

*Data are available only where point estimates are shown.

Current Smokeless Tobacco Use

Current smokeless tobacco use is defined as having used smokeless tobacco on one or more of the past 30 days. The prevalence of smokeless tobacco use among Duval County middle school students has decreased by 59.3 percent from 2.7 percent in 2000 to 1.1 percent in 2006. The prevalence of smokeless tobacco use among Duval County high school students has increased by 4.8 percent from 4.2 percent in 2000 to 4.4 percent in 2006.

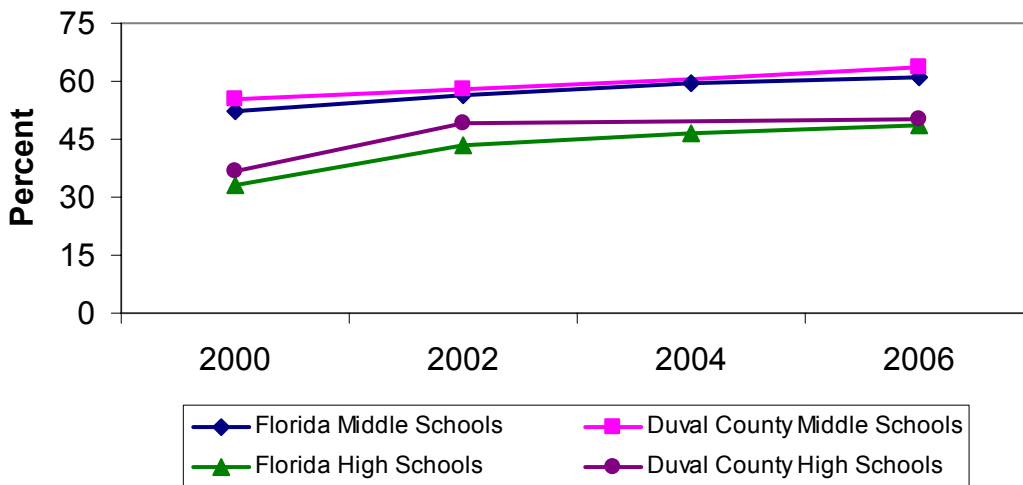

Current Smokeless Tobacco Use*

“Committed Never Smoker”

“Committed never smokers” are students who have never smoked a cigarette and state they will definitely not smoke a cigarette in the future or if a friend offered one. The prevalence of “committed never smokers” in Duval County middle schools has increased by 14.7 percent from 55.3 percent in 2000 to 63.4 percent in 2006. The prevalence of “committed never smokers” in Duval County high schools has increased by 35.5 percent from 36.9 percent in 2000 to 50.0 percent in 2006.

Committed Never Smokers*

Tobacco Use Prevention Education (TUPE)

To assess the amount of tobacco use prevention education (TUPE) students receive, survey respondents were asked about what they have learned in the past year in school regarding tobacco. Five questions related to TUPE were asked. Students were asked if they had learned: 1) about tobacco use; 2) about reasons why people of their age smoke; 3) that most people of the same age do not smoke; 4) ways to say “no”; and 5) about the negative effects of smoking, such as yellowed teeth, wrinkles, or bad smell.

Comprehensive TUPE

Students who respond they have been taught about all five of the above-mentioned topics during the past school year are considered having received comprehensive TUPE. Middle school students in Duval County show a 19.2 percent increase of receiving comprehensive TUPE from 16.7 percent in 2000 to 19.9 percent in 2006. High school students in Duval County show a 31.7 percent decrease of receiving comprehensive TUPE from 14.5 percent in 2000 to 9.9 percent in 2006.

Any TUPE

Students who respond that they have been taught about any one of the above-mentioned topics are considered having received “Any TUPE.” Middle school students in Duval County show an 18.1 percent increase of receiving “any TUPE” from 66.6 percent in 2000 to 78.6 percent in 2006. High school students in Duval County show a 10.5 percent decrease of receiving “any TUPE” from 58.7 percent in 2000 to 52.5 percent in 2006.

Secondhand Smoke Exposure

Secondhand smoke (SHS), also known as environmental tobacco smoke (ETS), refers to a combination of side-stream smoke (smoke that is emitted from the end of a lit cigarette, pipe, or cigar) and main-stream smoke (smoke exhaled by a smoker). SHS is the third leading cause of preventable death in the United States.¹ In 2003, Florida passed the Florida Clean Indoor Air Act, which bans smoking in workplaces to try to reduce the number of Floridians negatively impacted by the effects of SHS.

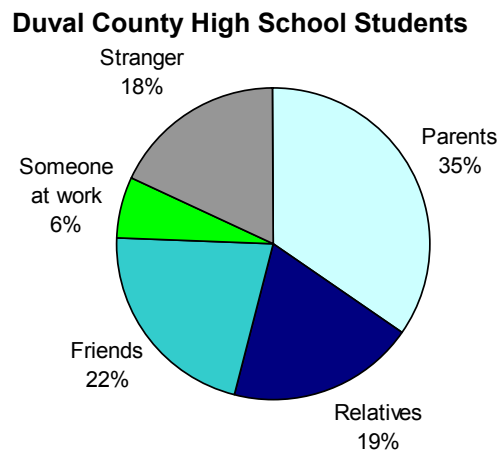

Exposure to Secondhand Smoke

The prevalence of exposure to SHS among Duval County middle school students has decreased by 16.7 percent from 64.7 percent in 2000 to 53.9 percent in 2006. The prevalence of exposure to SHS among Duval County high school students has decreased by 4.8 percent from 68.5 percent in 2000 to 65.2 percent in 2006.

Source of Secondhand Smoke Exposure: 2006 Survey Data

The two charts below show the different people who were the source of SHS exposure for Duval County middle and high school students. Both middle and high school students were most likely to be exposed to SHS by their parents.

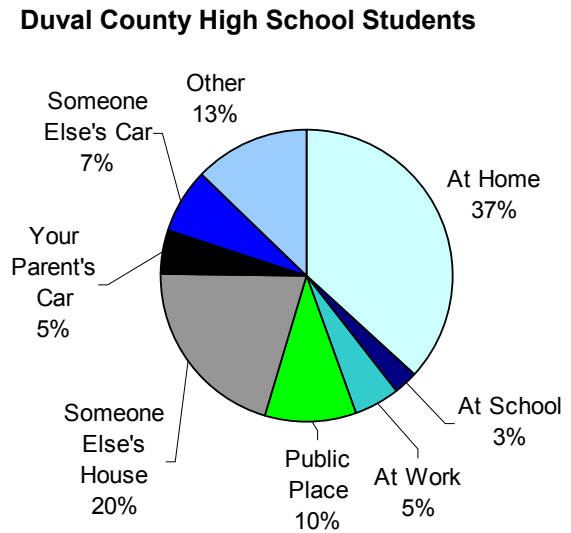

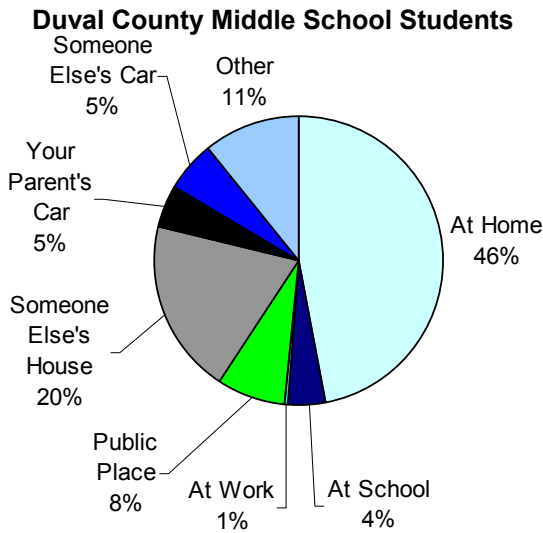

¹ "Secondhand Smoke, Who is at Risk?" Florida Department of Health, Division of Environmental Health, 2006.

*Data are available only where point estimates are shown.

Location of Secondhand Smoke Exposure: 2006 Survey Data

The two charts below show the locations in which Duval County middle and high school students were exposed to SHS. Both middle and high school students were most likely to be exposed to SHS at home.

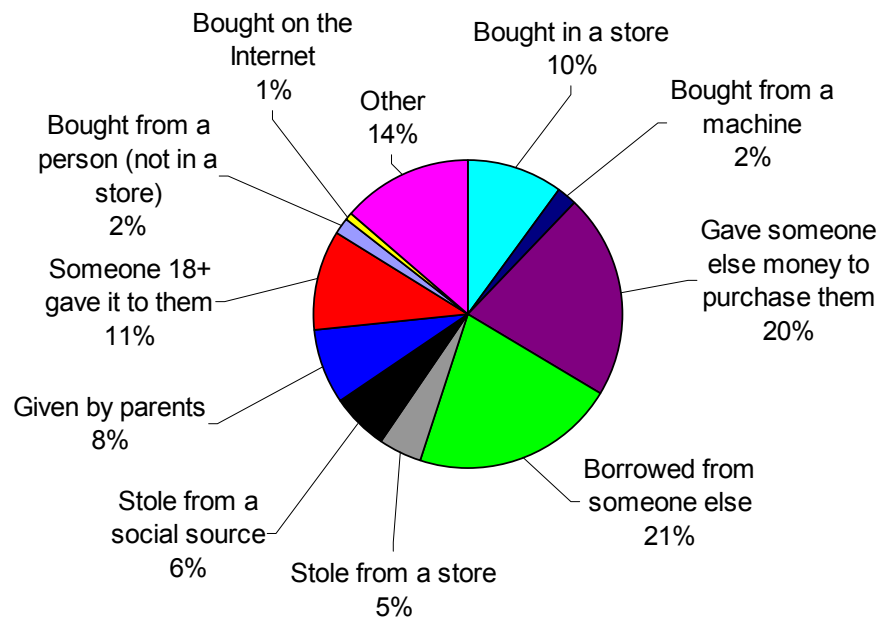

Tobacco Sources

Source of Cigarettes for Minors

Students are asked on the FYTS how they usually acquire their cigarettes. This analysis has been limited to students who are minors, or less than 18 years of age. The chart below shows how Duval County minors (in either middle or high school) acquire cigarettes. Duval County minors are most likely to get their cigarettes by borrowing them or by giving someone else money to purchase them.

Cigarette Sources for Minors

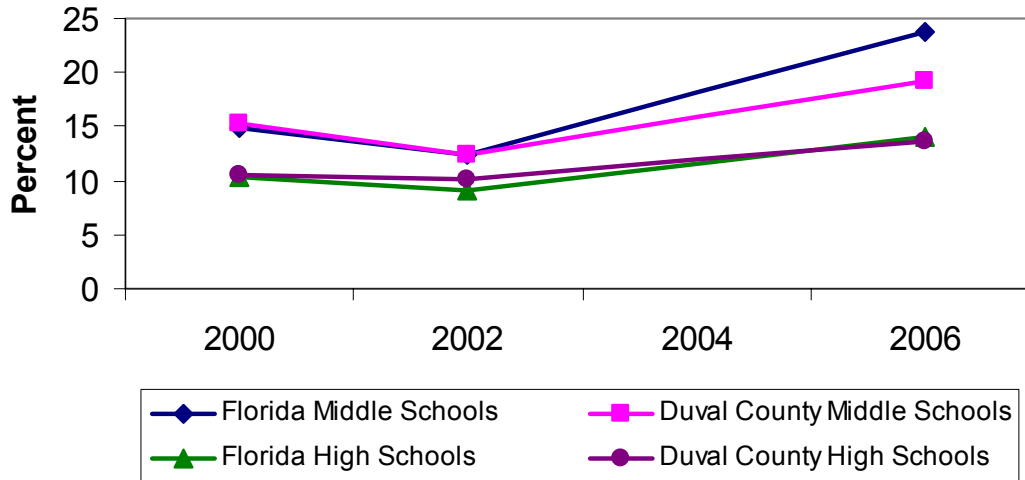

Anti-Tobacco Activism

Participation in an Anti-Tobacco Community Event

The prevalence of Duval County middle school students' participation in anti-tobacco community events has increased by 26.6 percent from 15.2 percent in 2000 to 19.2 percent in 2006. The prevalence of Duval County high school students' participation in anti-tobacco community events has increased by 28.4 percent from 10.6 percent in 2000 to 13.6 percent in 2006.

Participation in Community Anti-Tobacco Events*

Students Working Against Tobacco (S.W.A.T.)

The prevalence of Duval County middle school students who served as active members of S.W.A.T. has decreased by 32.2 percent from 4.4 percent in 2000 to 3.0 percent in 2006. The prevalence of Duval County high school students who served as active members of S.W.A.T. has decreased by 26.1 percent from 3.3 percent in 2000 to 2.4 percent in 2006.

Active Members of SWAT*

*Data are available only where point estimates are shown.

Social Attitudes

Perception that Smokers have More Friends

Students are asked on the FYTS whether or not they believe that young people who smoke have more friends. The chart below shows the percentage of students who report that they “definitely do not think” that smokers have more friends. In 2006, 32.9 percent of Duval County middle school students and 34.3 percent of Duval county high school students believed that smokers “definitely do not” have more friends.

Percentage of students who definitely did not think that smokers have more friends*

Perception that Smokers Look Cool or Fit In

Students are asked on the FYTS whether or not they believe that smoking helps young people “look cool” or “fit in.” The chart below shows the percentage of students who report that they “definitely do not think” that smoking helps young people look cool or fit in. In 2006, 71.3 percent of Duval County middle school students and 71.4 percent of Duval County high school students believed that smoking “definitely does not” help young people “fit in” or “look cool.”

Definitely did not think that smoking helps young people "look cool" or "fit in"	71.3	(68.0 - 74.7)	72.6	(71.9 - 73.4)	71.4	(68.1 - 74.7)	71.1	(70.3 - 71.9)

2006 Duval County Florida Youth Tobacco Survey Report

The collection and reporting of county-level survey data would not have been possible without the collaboration and tireless efforts of many. We thank our colleagues at: Florida Department of Health; Florida Department of Children and Families; Florida Department of Education; Florida Department of Juvenile Justice; Florida's Executive Office of the Governor, Office of Drug Control; The Centers for Disease Control and Prevention, Office on Smoking and Health; and ORC Macro. Special thanks go to our friends in the County Healthy Departments and local School District Offices. Most especially we thank the principals, teachers, and students who participated in the survey and made this information possible.

For more information about the FYTS, please contact: Ms. Jamie Weitz, M.S., Florida Youth Survey Coordinator, at (850) 245-4444, extension 2424 or by e-mail at Jamie_Weitz@doh.state.fl.us. Also, visit our website at: http://www.doh.state.fl.us/disease_ctrl/epi/Chronic_Disease/FYTS/Intro.htm .
