

2006 FLORIDA YOUTH TOBACCO SURVEY (FYTS) COUNTY DATA BOOK

PREPARED BY THE FLORIDA DEPARTMENT OF HEALTH
BUREAU OF EPIDEMIOLOGY
DECEMBER 2007

2006 FLORIDA YOUTH TOBACCO SURVEY
(FYTS) COUNTY DATA BOOK

Charlie Crist
Governor

Ana M. Viamonte Ros, M.D., M.P.H.
State Surgeon General

ACKNOWLEDGEMENTS

The collection and reporting of county-level tobacco survey data would not have been possible without the collaboration and tireless efforts of many. Thanks to our colleagues at: Florida Department of Health, Florida Department of Children and Families, Florida Department of Education, Florida Department of Juvenile Justice, Florida's Executive Office of the Governor, Office of Drug Control, the Centers for Disease Control and Prevention, Office on Smoking and Health, and ORC Macro. Special thanks go to our friends in the county health departments and local school districts. Most especially we thank the principals, teachers, and students who participated in the survey and made this information possible.

ADDITIONAL INFORMATION

INTRODUCTION

The Florida Department of Health initiated a tobacco prevention program in 1989 when it received federal funding to implement tobacco prevention and control activities. By 1997, the State of Florida successfully settled with the tobacco industry for \$11.3 billion to recoup Medicaid costs incurred by smokers. As part of the settlement agreement, the Florida Department of Health launched the Tobacco Pilot Program targeting tobacco use among underage youth.

The Florida Youth Tobacco Survey (FYTS), which was originally part of the Tobacco Pilot Program, is a statewide, school-based anonymous survey that has been conducted annually since 1998. The FYTS collects information regarding the prevalence of tobacco use, attitudes, and related behaviors among middle and high school students throughout Florida and tracks those behaviors over time. The FYTS has been administered to a state-level sample annually since 1998, except in 2000, 2002, and 2006 when a county-level survey was conducted.

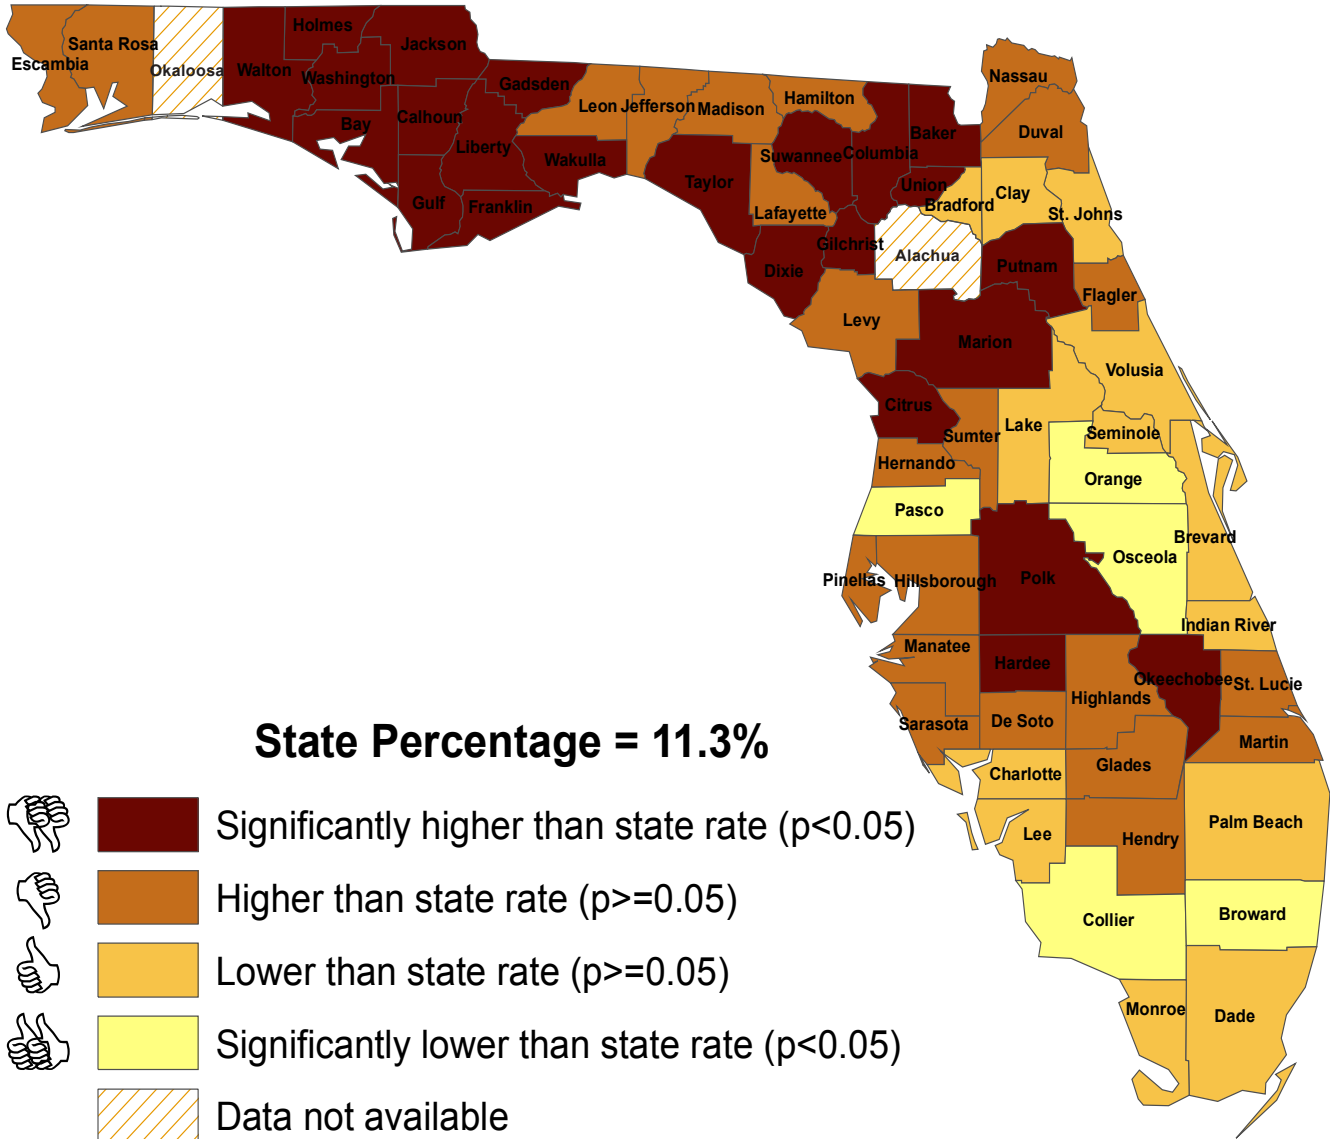

In 2000, the Florida Department of Health worked with other state agencies to coordinate school-based surveys to reduce the burden on schools, teachers, and students. The FYTS became part of a multi-agency joint survey effort that also includes the Florida Youth Substance Abuse Survey (FYSAS), the Youth Physical Activity and Nutrition Survey (YPANS), and the Youth Risk Behavior Survey (YRBS).

The FYTS is based on a two-stage cluster probability sample design. First, a random sample of public middle schools and high schools is selected for participation in the survey. Then, within each selected school, a random sample of classrooms is selected, and all students in that class are invited to participate in the survey. To be able to generalize the data to all of Florida, the survey data were statistically weighted. Weighting is a procedure that adjusts for oversampling and for any discrepancies between the sample and the entire population from which the sample is drawn. The weighted responses of the survey participants that are presented in this report were calculated to reflect the prevalence of tobacco usage and related indicators among all Florida public middle and high school students within each county and for Florida as a whole.

The 2006 county-level FYTS was implemented in the spring of 2006. Sixty-five of the 67 Florida counties participated in this survey. The survey was administered to 33,112 middle school students (grades six to eight) and 29,325 high school students (grades nine to twelve) in 783 public schools throughout the state. The survey response rate for middle school students was 73% and the survey response rate for high school students was 68%. Two counties, Alachua and Okaloosa, were omitted from this report because they did not conduct a county survey in 2006.

In this report, county values are presented for key indicators with maps for both middle and high school students, followed by detailed tables listing the prevalence by county. On each map, counties have been split into four groups: 1) counties whose rates are higher than the state rate and statistically significant ($p < 0.05$); 2) counties with rates higher than the state rate, but not statistically significant ($p \geq 0.05$); 3) counties that are lower than the state rate, but not statistically significant ($p \geq 0.05$); and 4) counties whose rates are lower than the state rate and statistically significant ($p < 0.05$). The tables show the total for the county, as well as the breakdown by gender for each county, including 95% confidence intervals (C.I.). A 95% C.I. is a range in which the “true” rate will fall 95% of the time. These figures will allow readers to view their county in comparison to other counties, as well as to the State of Florida. Results were omitted if there were less than 30 respondents for a specific indicator.

Map 1. Percentage of Florida Middle School Students Who are Current Tobacco Users*, 2006

*Current Tobacco Use is defined as students who used any form of tobacco on one or more occasions during the past 30 days.

Data from the 2006 FYTS.

Map 11. Percentage of Florida Middle School Students Who Received Any Tobacco Use Prevention Education (TUPE)*, 2006

*Any TUPE is defined as students who reported that they had learned about any one of the following in class: tobacco use, why kids smoke, most kids do not smoke, how to say "no," and health effects of smoking.

Data from the 2006 FYTS.

Map 13. Percentage of Florida Middle School Students Who Received Comprehensive Tobacco Use Prevention Education (TUPE)*, 2006

*Comprehensive TUPE is defined as students who reported that they had learned about ALL of the following in class: tobacco use, why kids smoke, most kids do not smoke, how to say "no," and health effects of smoking.

Data from the 2006 FYTS.
