

## Florida 2008 Arbovirus Activity by County Through January 5th, 2008

Rebecca Shultz, MPH, Caroline Collins, Danielle Stanek, DVM, Medical Epidemiologist, and Carina Blackmore, DVM, PhD, State Public Health Veterinarian, State Environmental Epidemiologist

### Year-to-Date Information for 2008

As of 1/5	Virus	2008 YTD	2007 YTD
Human cases	EEEV	0	0
	WNV	0	0
	CEV	0	0
Counties under medical alert/advisory		None.	None.
Counties with activity	EEEV	0	0
	WNV	0	0
	HJV	0	0
	SLEV	0	0
	CEV	0	0

*Disclaimer: Please note that data are subject to change with confirmatory information.*

### 1. Human Surveillance

Eastern equine encephalitis virus (ICD-9 Code 6220 and 6221)

None.

West Nile virus (ICD-9 Codes 6630 and 6631)

None.

### 2. Animal Surveillance

Eastern equine encephalitis virus

None.

---

Highlands J virus

None.

---

St. Louis encephalitis virus

None.

---

West Nile virus

None.

---

### **3. Mosquito Surveillance**

None.

---

For more surveillance information, please see the DOH web site at: <http://www.MyFloridaEH.com/community/arboviral/index.html> or call the Disease Outbreak Information Hotline which offers updates on medical alert status and surveillance at **888-880-5782**.

#### ***Current Bird Mortality Reporting Guidelines:***

1. Report dead birds to [www.myfwc.com/bird/](http://www.myfwc.com/bird/). From that site, you can link to online bird identification sites. Under most circumstances, testing is not warranted. There is value in the reported information submitted even if the bird is not tested. The Florida Fish and Wildlife Conservation Commission (FWC) tracks all clusters of wild bird mortality in the state. **Between December 30th, 2007, and January 5<sup>th</sup>, 2008, 7 reports representing a total of 18 dead birds (0 crows, 0 jays, 1 raptor) were received from 6 of Florida's 67 counties.**
2. The DOH Lab in Tampa still accepts dead bird specimens for testing, as long as they are shipped in good condition. When there is a need to verify the cause of an increased corvid (i.e. crows and jays) or overall bird mortality, a representative sample may be submitted to the Tampa laboratory for arboviral testing. Instructions for submission of dead birds are found at: <http://www.MyFloridaEH.com/community/arboviral/index.html>. Select "How Do I Report?", and then choose "Protocol for Collecting and Shipping Bird Carcasses" under "Dead Birds" subtopic.
3. Clusters of mortality of single non-corvid species or families of birds such as doves, ducks or pelicans are usually not caused by WNV and should not be submitted for WNV testing. However, we still want them reported to the FWC website.
4. If personnel are not able to offer pick-up service, yet they desire to collect specimens, determine a drop-off station and provide the caller with safe handling instructions. A county may modify their testing approach depending on the availability of other surveillance systems in the county.

---

**Acknowledgements and data sources:** county health departments, Department of Health Laboratories, Department of Agriculture and Consumer Services, mosquito control agencies, Florida Fish and Wildlife Conservation Commission, medical providers and veterinarians. Equine cases are determined by the Department of Agriculture and Consumer Services.

---

\* Wild captured bird information is provided by the John A. Mulrennan Public Health Entomology Research and Education Center. For more information, go to <http://www.pherec.org/DECS>, and click on "Arbovirus Ecology" to download the database, then the "Bird Serology" tab.
