*COPD-Chronic Obstructive Pulmonary Disease.

*A crude death rate gives a general estimate of mortality in a population; it does not provide an accurate picture of the true nature of mortality because of the differences of population composition.

*An age-adjusted death rate (AADR) adjusts the differences in age distribution and allows populations with different age structures to be compared. These two rates are per 100,000 population.

Note: Diabetes in Calhoun: 5th leading cause, COPD 6th. Calhoun-Diabetes: # deaths-7 (District II-183), crude rate-51.3 (District II 26.5), AADR-43.2 (District II-29.9).
