*COPD-Chronic Obstructive Pulmonary Disease.

*A crude death rate gives a general estimate of mortality in a population; it does not provide an accurate picture of the true nature of mortality because of the differences of population composition.

*An age-adjusted death rate (AADR) adjusts the differences in age distribution and allows populations with different age structures to be compared. These two rates are per 100,000 population.

Note: Diabetes in Jefferson: 5th leading cause. Jefferson-Diabetes: # deaths-4 (District II-183), crude rate-28.3 (District II 26.5), AADR-23.3 (District II-29.9).
